

Test 10 — Model, View, Controller (Part 1)

C# Programming

This is a timed test. You have one hour to complete the test. When you finish the test, email me your deliverables as a zip archive, and let me know that you have finished. I will ask you to run your program so that I can see that it compiles and runs.

Write an ASP.NET MVC application with one model, one controller, and one view. If you don't remember how, review chapter 3 of the text. Create a **model** of yourself with at least four properties. For mine, I chose my name, father's name, mother's name, wife's name, daughter's name, and son's name. Create a **controller** that creates an instance of your model and sends it to a view. Create a **view** that simply displays your person in good HTML. Your deliverables are as follows:

1. your model source code,
2. your controller source code,
3. your view source code, and
4. a screenshot of your running application.

Email me your deliverables. Do not push them to Github.
